 Department of Pediatric Dentistry  
 M. A Rangoonwala Dental Institute of Health Sciences, Pune India  
 November 2006 - November 2010

### Research Work Undertaken

- Caries experience, streptococcus mutans level and dietary preferences in children with various genetic sensitivity levels to the bitter taste of 6-n-propylthiouracil (PROP) - Published
- Hormonal fingerprint—A bone marker or a tool used for ruling out the taste perception, behavioural pattern, dietary habits leading to a risk of developing obesity and cancer in young population with genetic sensitivity levels to the bitter taste of 6-n-propylthiouracil - Published

### Publishing Experience

- Married in a family of authors, I was always encouraged to write medical content. Initially I wrote few books with my father in law who was himself a medical author and held a world record of writing 113 books, that led to inclination towards writing. At the same time of the year in 2006, I was also offered to author a title "Differential diagnosis of Dental Disease". Although the topic was quite challenging but I accepted it as it would be interesting to venture in a new zone.
- My first book was released in 2007, and the second book Dental Dictionary which is till date running as a best seller and has been converted into various languages was released in 2009. Then comes the most interesting part of my journey, where I was getting many proposals to write a complete book on pediatric dentistry, I was interested in one of the least discussed topic ie Special care dentistry.
- It took me almost a year to get the publisher convinced but then the project finally got rolling in 2010, I took almost 5yrs to complete this title to my satisfaction, I was so involved in the project that not only writing, I planned the layout as well and took active participation in production of the book. This caught the attention of the publisher and they offered me to take over the post of Editor - in - Chief for dental sciences for their 200+ books catalogue in 2014
- The job profile included, handling the entire portfolio for dental books i.e. manuscript approval, reviewing all manuscripts related to dentistry, editing at various levels, gap analysis with respect to content for already published books and gap analysis with respect to missing titles in the market, recruiting affluent authors for prospective projects and getting new and latest titles in to the market. Duties undertaken at a publishing house includes completion of text books from inception till press. Conducting Promotional activities such as organizing CDE programs, brand ambassador programme, Delivering lectures and Author Acquisitions are few of the duties that were undertaken. During my tenure of 3 years, i completed 31 projects right from inception to completion of project
- In 2014, I was again offered to edit another challenging title " General medicine for dental students that was successfully launched in 2015.
- Towards the end of 2015, I completed the title Pediatric Dentistry for Special Child and it was released Globally on Frankfurt Book Fair
- In 2016, I released another for undergraduates ie Essential quick review " A series of 16 books which again a new concept and was accepted very well by students
- In December 2018-another title was released " Clinical Guide for Overseas Dental Examination".

### Overseas Experience

- Clinical Attachment-Oral & Maxillofacial Surgery  
Department of Oral and Maxillofacial Surgery  
Basildon and Thurrock Hospital  
Nether mayne

Basildon SS16 5NL, UK

5<sup>th</sup> August to 14<sup>th</sup> November 2003

Worked as a clinical attachee under the oral & maxillofacial consultant that has given me the opportunity to communicate and examine patients effectively. This post has also contributed in identifying signs and symptoms of the medically compromised patients who are in need of immediate treatment. I have acquired a good training and proficiency in the skills of doctor-patient relationship, rapport building, examination, undertaking investigations and confidence in forming management decisions to a variety of conditions in the clinics and to say the least, I have had constant encouragement, support and guidance in obtaining a higher qualification, which I feel will go long way towards making me a good clinician and providing the community a good service. As an added advantage, I have developed interpersonal skills, which enable me to communicate and work effectively as a team.

### My Experiences in Pediatric Dentistry

- Pediatric Dentistry has carved me very well professionally and personally, it has taught me to learn, listen and understand those unspoken words and emotions that comes along with that child in my premises. Out of all the things that has touched me the most is the Special care Dentistry and this area hold's a very special place in my heart, not because they need help but they teach us to find happiness in small things and that's what I feel is the take home message for me.

### Career Aim

- After working for so many years as pediatric dentist and authoring couple of books in dentistry, my heart still beat for this speciality. I still wish to learn more and more with respect to special care dentistry, developmental dentistry and many avenues unexplored.
